

Memorandum for Record

To: Developers Considering Reusing or Activating eHMP Software
From: Integration Control Registration (ICR) Team
Date: 3/12/2018
Subject: eHMP Integration Control Registrations (ICRs) Status

1. Overview

The enterprise Health Management Platform (eHMP) project was discontinued and the active software components disabled before all Integration Control Registrations (ICRs) were completed. If the software is reactivated or components of eHMP are reused, it is important to understand that not all ICRs are complete. Due to the eHMP project shutdown it was not possible to issue a patch to complete the ongoing ICR reconciliation. The menu options HMP UI CONTEXT and HMP SYNCHRONIZATION CONTEXT need to be reviewed to ensure all remote procedure calls (RPCs) are in use and supported by an active ICR.

Upon any reuse of the eHMP software or reactivation, the ICR evaluation process will need to be restarted. A list of the ICRs with the status at the time of shutting down the project is included below to give an indication of what had been completed and what was expected to be included in future releases.

Some of the outstanding ICR issues, but not all, are resolved in patch HMP*2.0*4, which completed IOC testing but was not released and is listed as Under Development in FORUM.

2. Integration Control Registrations (ICRs) with HMP as the Subscribing Package

On 10/3/17, the HMP project team stated the ORWLR CUMULATIVE REPORT RPC is not used but is included in the HMP UI CONTEXT option. HMP was added as a subscriber on 10/26/17 to document HMP's use of the ICR. If HMP is reactivated in the future, the HMP project team will need to work with the CPRS team to resolve this issue.

6355	SCMC PATIENT TEAM CHANGES	SCHEDULING	Pending	Retired	10/27/17	ICR #6355 documents adding HMP PCMM TEAM POSITION to SCMC PATIENT TEAM CHANGES protocol. ICR #6356 documents adding HMP PCMM TEAM protocol to SCMC PATIENT TEAM POSITION CHANGES protocol. It was originally thought the SCMC protocols would not be used by the PCMM Web application. On 9/30/16 Andy Thompson from PCMM said he can see where these protocols are used by Vista. As part of syncing data back to Vista, PCCM Web calls the SC PAT ASGN MAILMAN RPC to create Mailman messages regarding patient team and team position changes. Which in turn fires the protocols referenced in the ICRs 6355 & 6356. The HMP protocols would be fired as well. HMP project will be shutting down as of 10/27/17. If HMP is reactivated in the future, this ICR should be discussed with PCMM Web team to confirm the HMP protocols attached to the SCMC PATIENT TEAM CHANGES and SCMC PATIENT TEAM POSITION CHANGES protocols provide the necessary data for HMP.

6446	HMP ACCESS TO THE LAB DATA FILE	LAB SERVICE	Pending	Retired	10/27/17	<p>Discussions between the Lab package resources and HMP contacts identified possible concerns that eHMP may be getting Lab updates from the protocol but may not be getting 'AP' updates they are expecting. It was also noted AP orders are not currently part of CPRS. EHMP was also asked if they knew that TIU document names are nationally standardized and there is a 1:1 correlation between the API section and the corresponding TIU Document definition. It was also noted that not all sites use electronic signature so their AP reports are stored in the Lab Data file.</p> <p>These questions and issues were not resolved prior to HMP shutdown on 10/27/17 and the ICR was not activated.
