Introduction

Purpose of the Standardized Episodes of Care System

The Care Coordination (CC) Standardized Episodes of Care (SEOC) is a reference database for managing care bundles for use by Veterans Information Systems and Technology Architecture (VistA) and other Department of Veterans Affairs (VA) systems. Services are grouped together within the SEOC system into bundles so that clinicians can add these bundles to patients consult records in a standardized fashion, reducing the amount of time spent manually entering consult instructions, and providing uniformity among the patient records and across facilities for how patient care is prescribed for similar complaints.

These bundles group together one or more services that are preselected for different specialties to be added to the consult records. In addition, the clinician is provided with information regarding prescribing rules and preauthorization requirements, so they can make the most informed decisions regarding patient care.

Additionally, SEOC data will be accessible outside of the VistA/Computerized Patient Record System (CPRS) system so that users of downstream applications will be accessing the centralized data, and SEOC descriptions, reducing the chances of disconnects.

Scope of the Manual

This manual provides technical descriptions for accessing the SEOC Representational State Transfer (REST) Application Programming Interface (API).

From time to time improvements are made to the SEOC System. The latest information about SEOC, as well as the latest version of this manual, is posted on the SEOC Web Page.

Audience

Information in this manual is technical in nature and is intended to be used by Veterans Affairs Medical Center (VAMC) Information Resource Management Service (IRMS) staff members and Clinical Application Coordinators (CAC's).

New Features

N/A

Overview of SEOC

The SEOC System provides an interface for downstream systems to access SEOCs from the SEOC database via a REST API. The SEOC record(s) will be returned to the calling application (such as the Clinician Toolbox) in JavaScript Object Notation (JSON) format.

Package Orientation

This technical manual provides technical descriptions of REST API calls available, and a sample JSON message.

This manual should assist you in:

- Calling the available API calls.
- Developing parsing routines necessary to consume the JSON data returned by the API calls.

API Description

Method: GET --header 'Accept: application/json'

Request URLs:

Base URL: 'https://<hostname>:<port>'. (e.g. https://vawww.seocapi.va.gov)

All SEOCs: /v1/seoc

Active SEOCs: /v1/seoc/active

SEOC by Name: /v1/seoc/name/{name}

SEOC by ID: /v1/seoc/{id}

Request Headers:

```
{
  "Accept": "*/*"
}
```

Response Messages (Errors):

| HTTP Status Code | Reason | Response Model | Headers |
|------------------|------------------|----------------|---------|
| 204 | No Content Found | string | |
| 401 | Unauthorized | | |
| 403 | Forbidden | | |
| 404 | Not Found | | |

Response Message (Success): 200 OK

Response Headers:

```
{
  "content-type": "application/json;charset=UTF-8",
  "content-length": "<length>",
  "date": "Tue, 10 Apr 2018 20:17:03 GMT",
  "...": ""
}
```
