# **PREFACE**

This is the Technical Manual for the Integrated Billing (IB) software package's electronic Insurance Identification and Verification Interface (IIV) which was first introduced as Patch IB\*2.0\*184. It is designed to assist IRM personnel in the operation and maintenance of the interface.

For information regarding use of the software, please refer to the Integrated Billing Insurance Identification and Verification Interface User Guide and the Integrated Billing User Manual.

For information on the installation of this interface, please refer to the Integrated Billing Insurance Identification and Verification Interface (eIV) Installation Guide.

# **Symbols**

The following are explanations of the symbols used throughout this manual.

<RET> Press the RETURN or ENTER key.

<SP> Press the SPACEBAR.

<^> Up-arrow, which you enter by pressing the SHIFT key and the numeric 6 key simultaneously

<?><??><???> Enter single, double, or triple question marks to activate on-line help, depending on the level of help you need.

#### Note to Users with Qume Terminals

It is very important that you set up your Qume terminal properly. After entering your access and verify codes, you will see

Select TERMINAL TYPE NAME: {type} //

Please make sure that <C-QUME> is entered here. This entry will become the default. You can then press <RET> at this prompt for all subsequent logins. If any other terminal type configuration is set, options using the List Manager utility will neither display nor function properly on your terminal. The reports and error messaging system in the interface makes extensive use of the List Manager functions.

#### Who Should Read this Manual?

This manual is intended for technical IRM personnel who may be called upon to install and support this software.

(This page included for two-sided copying.)

# INTRODUCTION

#### **Overview**

The release of Integrated Billing patch IB\*2.0\*184 introduced electronic Insurance Identification and Verification (IIV). The IIV project has been renamed and is now referred to as Electronic Insurance Verification (eIV).

The purpose of eIV is to automate:

• The determination of eligibility for claimed insurance (Verification).

This interface was planned and designed to be a Class I initiative with the coordination and assistance of the national IB team.

The software enhancements included in the patches that are described within this document directly support the following VHA program initiatives:

- 1. The VHA Revenue Cycle Improvement Plan approved by Secretary Principe in September, 2001, and particularly:
  - a. Recommendation 5 of that Plan, which calls for implementation of automated methods of identifying and verifying veteran insurance coverage.
  - b. Recommendation 3 of that Plan, which recommends adopting a national policy for the update of patient data no less frequently than every six months.
- 2. The VHA Office of Compliance and Business Integrity (CBI) Program Indicator No. 3a, which measures, among other things, whether patient insurance coverage is verified every six months.

The Technology Services Division of DAOU Systems Inc., 8401 Connecticut Ave. Suite 700, Chevy Chase, MD 20815, provided the interface between the existing IB software and the Eligibility Communicator (EC), located at the Financial Service Center (FSC) in Austin, TX.

#### Functional Description

The Electronic Insurance Verification (eIV) project provides an extension to the existing VistA Insurance Buffer functionality by enabling electronic confirmation of third-party commercial health insurance coverage for registered VA patients. Each night a process is run, which compiles a batch of insurance eligibility inquiries based on activity within the system. Sources include unverified insurance information entered in the Insurance Buffer as well as patients that have scheduled appointments or have had past encounters, but have not had a recent verification of their insurance files.

VistA performs both a Buffer Extract and an Appointment Extract. For the Appointment Extract; VistA prepares HL7 inquiries during the night in response to appointment events. For the Buffer Extract, VistA immediately prepares HL7 inquiries in response to registration and check in events. The HL7 inquiries are transmitted to the Eligibility Communicator at the FSC. The messages are translated into 270 Health Care Eligibility Benefits Inquiry messages. They are then sent to the VA's clearinghouses who then distribute them to the correct insurance companies. The 271 Health Care Eligibility Benefits Responses are returned from the payer through the clearinghouses to FSC for translation into an HL7 format and then transmitted to the originating VistA system. There the information is either placed into the insurance buffer for the insurance clerk to review and process to the patient's insurance file or used to automatically update the patient's insurance file.

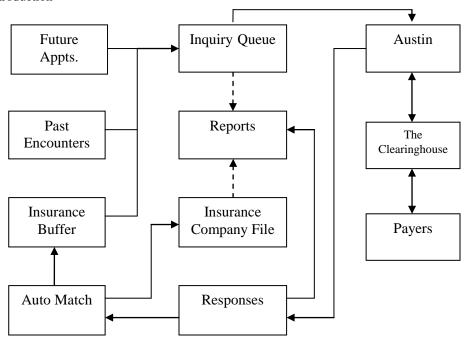

Figure 1. Overview of eIV Process

Inquiries are then verified through an exchange of HIPAA-compliant electronic communications between the VistA system and an Eligibility Communications server that is located at the FSC in Austin, Texas. This national datacenter receives the eligibility inquiry messages and forwards the request to an electronic clearinghouse of insurance information. The clearinghouse, in turn, forwards the inquiry to the requested payer, ex. Aetna, Blue Cross/Blue Shield, etc. The payer issues a response message to confirm or deny coverage based on the information provided in the inquiry. The response message is routed back to the VistA site and may be posted to the Insurance Buffer where authorized users can review and accept the returned information into the current insurance files through enhancements to the insurance buffer list option.

One challenge inherent in this process results from the fact that each VA site is able to maintain a separate list of insurance companies. In order for the various VistA locales to be able to effectively request eligibility information for the various payers, a national VA insurance payer list has been established to provide a standard identification system for all payers that are participating in this process. Enhancements have been added to allow each VA site the ability to link the insurance companies in their own site's list to the appropriate payer in the national payer list. This standardizes the identification of the payer to which each inquiry should be directed.

Additional features were also added to assist the users of the insurance buffer with eIV related tasks. A feature named "Auto Match" has been added that allows the system to be "taught" rules for matching the user-entered insurance company names in the insurance buffer to existing entries in the site's insurance company file. Also, a method has been added for accepting information from an insurance buffer entry into the patient's permanent insurance records that allows each data field change to be individually accepted or rejected. Another feature allows a user to select multiple buffer entries for the Process, Expand, and Reject entry actions, to ease the process of working with larger sets of buffer entries.

# eIV Process Flow

Each VistA system, as the Insurance and Verification patch software is installed, is eligible to send and receive messages from the Eligibility Communicator (EC,[ EC messaging passes through/via the Vitria server]), the component of eIV located at the Austin Information Technology Center (AITC) formerly Austin Automation Center (AAC). VistA communication methodology is through a TCP/IP connection to the Vitria server in the form of an HL7 message. Vitria validates the HL7 message.

If the message fails EC's validation, the sending VistA facility receives an error message from EC. Otherwise EC processes the message and returns responses to most of them as defined in this Interface Design Document (IDD).

Vitria transforms the HL7 message to a standard X12 270 message and sends it on to the Clearinghouse.

The Clearinghouse processes the 270 message on to the appropriate payer. When the Clearinghouse receives a response from the payer, it is forwarded back to Vitria at Austin. If the response is a 997 error response, steps to determine the problem are taken to resolve the problem.

If a "success" response is received from the payer via the Clearinghouse in a 271 message, Vitria saves the data into the National Insurance Cache and transforms it to an HL7 message. The message is then sent back to the VistA facility for processing. Vista facilities can set site parameters to either have the messages returned real-time, or held and batched for processing at a later time.

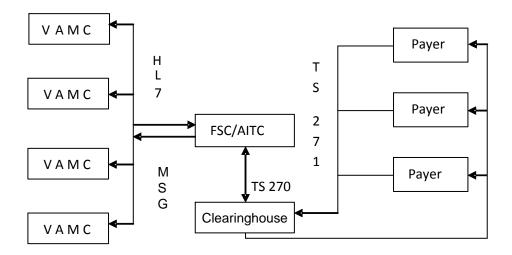

Figure 2. Diagram of the process-flow for electronic eligibility requests sent by the eIV process

# VistA Registration Dialog

When a site installs the eIV software and performs all of the post-installation instructions, a registration message will be sent to confirm the registration and update any site-specific information. Any subsequent changes to the payer table are initiated by FSC.

# IMPLEMENTATION AND MAINTENANCE

# General Notes Regarding Changes to this Software

- 1. Integrated Billing files may only be updated through distributed options.
- 2. Per VA Directive 6402 regarding security of software that affects financial systems, most of the IB routines and files may not be modified. Routines that may not be modified will be indicated by a comment on the third line. Files that may not be modified will have a note in the file description.
- 3. According to the same directive, most of the IB Data Dictionaries may not be modified.

# Platform Requirements

#### **VistA System:**

A fully patched and complete VistA system is required, running Integrated Billing (IB) Version 2.0.

In addition, the VistA system must have a properly installed and functioning HL7 module.

#### Hardware Requirements

The eIV patch requires a standard implementation of VistA running on a hardware platform that is commonly supported by VistA.

Additionally, TCP/IP network connectivity needs to be available between the site's VistA server and the Eligibility Communicator (EC) server located at the FSC in Austin, TX. The EC server is connected to the VA's intranet; therefore connectivity should be available without additional action as long as the VistA server is also connected to the VA's intranet.

#### Globals

Global ^IBCN should have been created prior to installation of IB\*2.0\*184.

#### Data Files Stored in the Global ^IBCN:

- IIV RESPONSE (#365)
- IIV TRANSMISSION QUEUE (#365.1)
- IIV AUTO MATCH (#365.11)
- IIV RESPONSE REVIEW (#365.2)

#### Data Files Stored in the Global ^IBE:

- X12 271 ELIGIBILITY/BENEFIT (#365.011)
- X12 271 COVERAGE LEVEL (#365.012)
- X12 271 SERVICE TYPE (#365.013)
- X12 271 INSURANCE TYPE (#365.014)

- X12 271 TIME PERIOD QUALIFIER (#365.015)
- X12 271 QUANTITY QUALIFIER (#365.016)
- X12 271 ERROR CONDITION (#365.017)
- X12 271 ERROR ACTION (#365.018)
- X12 271 CONTACT QUALIFIER (#365.021)
- PAYER (#365.12)
- PAYER APPLICATION (#365.13)
- IIV TRANSMISSION STATUS (#365.14)
- IIV STATUS TABLE (#365.15)
- X12 271 ENTITY IDENTIFIER CODE (#365.022)
- X12 271 IDENTIFICATION QUALIFIER (#365.023)
- X12 271 PROVIDER CODE (#365.024)
- X12 271 DELIVERY FREQUENCY CODE (#365.025)
- X12 271 DATE QUALIFIER FILE (#365.026)
- X12 271 LOOP ID (#365.027)
- X12 271 REF IDENTIFICATION (#365.028)
- X12 271 UNITS OF MEASUREMENT (#365.029)
- X12 271 ENTIITY RELATIONSHIP CODE (#365.031)
- X12 271 DATE FORMAT QUALIFIER (#365.032)
- X12 271 YES/NO RESPONSE CODE (#365.033)
- X12 271 LOCATION QUALIFER (#365.034)
- X12 271 PROCEDURE CODING METHOD (#365.035)
- X12 271 DELIVERY PATTERN (#365.036)
- X12 271 PATIENT RELATIONSHIP (#365.037)
- X12 271 INJURY CATEGORY (#365.038)
- X12 271 MILITARY PERSONNEL INFO STATUS CODE (#365.039)
- X12 271 MILITARY GOVT SERVICE AFFILIATION (#365.041)
- X12 271 MILITARY SERVICE RANK (#365.042)
- X12 271 ENTITY TYPE QUALIFIER (#365.043)
- X12 271 CODE LIST QUALIFIER (#365.044)
- X12 271 NATURE OF INJURY CODES (#365.045)
- X12 271 MILITARY EMPLOYMENT STATUS CODE (#365.046)

#### Data Files Stored in the Global ^DIA:

• AUDIT (#1.1)

#### Globals to Journal

Journaling for the global **IBCN** is recommended. Journaling instructions from the IB Technical Manual should be followed.

#### Estimated Global Growth

Only two of the files related to eIV are expected to grow significantly over time. These files are the IIV TRANSMISSION QUEUE (#365.1) and IIV RESPONSE (#365) files. The growth rate of these files is

directly proportional to the number of inquiries/responses that are generated each day. The volume of daily activity at each site can be controlled through the batch extract settings defined in the MCCR Site Parameters screen. As an example, if 5,000 records are generated for one day, the total growth for that day may be up to 20 MB.

```
^IBCN(365) - .003 Mb per entry (IIV Response File #365)
^IBCN(365.1) - .001Mb per entry (IIV Transmission Queue #365.1)
```

Note that functionality has been included that allows data in these files to be purged if it is at least six months old.

Another file that is expected to grow is the AUDIT (#1.1) used to track changes for the User Edit Report.

```
^DIA(1.1) - 1KB/record (Audit File #1.1)
```

#### **HL7 Management**

eIV makes heavy use of HL7 messaging. Ensure that the HL7 globals have sufficient room for growth. Reference HL\*1.6\*19 patch documentation for further instructions. Also, reference the External Interfaces – HL7 Communications Setup section, in this manual, for specific eIV HL7 information.

This interface is dependent upon both an IP address and the port on which HL7 listens. If any of the following scenarios occur, you may need to adjust the settings for one of the eIV logical links. Without this adjustment, the interface will stop transmitting insurance inquiries and receiving eligibility responses. In other words, the interface will stop working.

- The VAMC changes which node is the start-up node.
- The VAMC changes the port on which HL7 is listening.

If either of the above scenarios occurs, reference Appendix C for specific instructions related to adjusting the eIV logical links.

#### **Bulletins**

Currently there are no bulletins set up for the electronic Insurance Identification and Verification Interface Version 1.0 software.

# **TECHNICAL NOTES**

# Namespace

The eIV Interface has been assigned the namespace IBCNE. Approval was obtained in order to modify some routines in the IBJPI namespace. The IBCNE namespace is used for all new routines, options etc. associated with this interface. Routines directly associated with IB IIV Site Parameters uses the IBJPI namespace.

For all eIV routines, the next letter(s) in the routine name also provide guidance as to the module to which that routine belongs. The breakdown of the eIV internal namespaces is as follows:

| Sub-namespace | Description  |  |
|---------------|--|--|
| IBCNEAM       | Auto Match routines  |  |
| IBCNEBF       | eIV to create entry the Buffer File                                  |  |
| IBCNEDE       | Data Extract routines  |  |
| IBCNEDST      | HL7 Registration Message Statistics (reports statics to FSC)         |  |
| IBCNEHL       | Processing inbound or outbound HL7 messages                          |  |
| IBCNEHLM      | Registration message and associated acknowledgement                  |  |
| IBCNEHLK      | Registration message and associated acknowledgement                  |  |
| IBCNEHLU      | HL7 related utilities  |  |
| IBCNEK        | Purge eIV data from IIV files (#365 and #365.1)                      |  |
| IBCNEML       | Mailman notification to link Payers                                  |  |
| IBCNEP        | Payer related routines (related to PAYER file #365.12)               |  |
| IBCNEQ        | Request Electronic Inquiry (ad hoc QUERY requests)                   |  |
| IBCNERP       | Reports  |  |
| IBCNERTQ      | Makes eIV real-time insurance verification.                          |  |
| IBCNES        | (excluding IBCNESI) Eligibility/Benefit display and summary from eIV |  |
|               | responses and summary.   |  |
| IBCNESI       | Potential Medicare worklist.   |  |
| IBCNETST      | eIV Gate-keeper test scenarios                                       |  |
| IBCNEUT       | Utilities  |  |

# File Number Space

The eIV package file range is 365-366.2.

# Routines

These are current Integrated Billing programs that are part of the electronic Insurance Verification software.

| <b>Routine Name</b> | Description   |  |
|---------------------|---|--|
| IBCEMMR             | IB MRA Report of Patients w/o Medicare WNR  |  |
| IBCN118             | This program is Data Dictionary trigger logic for comments.   |  |
| IBCNAU              | This program is part of the User Edit Report.   |  |
| IBCNAU1             | This program is part of the User Edit Report.   |  |
| IBCNAU2             | This program is part of the User Edit Report.   |  |
| IBCNAU3             | This program is part of the User Edit Report.   |  |
| IBCNBAA             | This program displays subscriber registration information from the Insurance Buffer, IIV Response Report file, and Annual Benefits file (#355.4).   |  |
| IBCNBAC             | This program contains subroutines for the individual acceptance of buffer entry information.  |  |
| IBCNBAR             | Insurance Buffer Accept/Reject functions.   |  |
| IBCNBCD             | Compare buffer entry with existing patient insurance.   |  |
| IBCNBCD1            | This program edits subscriber information in the Patient Insurance subfile (File #2.312).   |  |
| IBCNBCD2            | This program sets up the Insurance Buffer to process Accepts.   |  |
| IBCNBCD3            | This program displays IB Annual Benefits/Coverage Limitations Display Screens.  |  |
| IBCNBCD4            | This program is part of Subscriber Display Screens.   |  |
| IBCNBCD5            | This program is part of Subscriber Display Screens.   |  |
| IBCNBCD6            | This program is part of Subscriber Display Screens.   |  |
| IBCNBCD7            | This program is part of Subscriber Display Screens.   |  |
| IBCNBCD8            | This program is part of Subscriber Display Screen Fields.   |  |
| IBCNBEE             | This program edits existing entries in the Insurance Buffer.  |  |
| IBCNBES             | This program files new entries/data into the Insurance Buffer.  |  |
| IBCNBLA             | This program executes List Manager actions for the Insurance Buffer List Manager.   |  |
| IBCNBLA1            | This program executes List Manager actions for the Insurance Buffer List Manager.   |  |
| IBCNBLA2            | This program contains subroutines for processing and validating the selection of multiple entries from the INSURANCE VERIFICATION PROCESSOR file (#355.33).                                     |  |
| IBCNBLB             | "Expand benefits" option in Insurance Buffer views.   |  |
| IBCNBLE             | This program is the Insurance Buffer entry screen.  |  |
| IBCNBLE1            | This program performs the Expand Entry action in the Insurance Buffer List Manager screen. Code to call utilities to reevaluate the eIV Status and display revised values is included, as well. |  |
| IBCNBLL             | This program generates the Insurance Buffer entries for the initial List Manager screen.  |  |
| IBCNBME             | This program is used to add or edit an Insurance Buffer entry for other packages.   |  |
| IBCNBMI             | This program moves data from the Insurance Buffer to the Insurance files.   |  |
| IBCNBOA             | This program contains the Ins Buffer Activity Report.   |  |

| Routine Name   | Description   |  |
|--|---|--|
| IBCNBOE  | This program contains the Ins Buffer Employee Report.   |  |
| IBCNBOF  | This program contains the Ins Buffer Employee Report (Entered)  |  |
| IBCNBU1  | This program contains Insurance Buffer utilities.   |  |
| IBCNBUH  | This program contains Insurance Buffer Help text.   |  |
| IBCNEAMC   | This program produces the list of auto matched entries for the  |  |
|  | INSURANCE VERIFICATION PROCESSOR file (#355.33).  |  |
| IBCNEAME   | This program allows users to enter or edit Auto matched entries.  |  |
| IBCNEAMI   | This program performs an input transform for the Auto Match   |  |
| TO COLUMN TO THE | functionality.  |  |
| IBCNEBF  | This program will create a Buffer entry based upon input values.  |  |
| IBCNEDE  | This program is the main driver for all data extracts associated with the Insurance Identification and Verification interface. This program will run each extract in the specified order, which populates the IIV Transmission File (sometimes it creates/updates an entry in the insurance buffer as well). It then begins to process the inquiries in the IIV TRANSMISSION FILE (#365.1). |  |
| IBCNEDE1   | This program loops through the insurance buffer and creates eIV transaction queue entries when appropriate. Periodically checks for stop request for background task.   |  |
| IBCNEDE2   | This program finds veterans who are scheduled to be seen within a   |  |
| IBCI (EBE2   | specified date range. Periodically checks for stop request for  |  |
|  | background task.  |  |
| IBCNEDE3   | This program finds veterans who have been seen within a specified date range that have active insurance records that have not been verified recently.  Periodically checks for stop request for background task.  |  |
| IBCNEDE4   | This program finds veterans who have been seen within a specified date  |  |
|  | range but who have no active or no insurance records. Periodically checks for stop request for background task.   |  |
| IBCNEDE5   | This program contains function calls used for the data extracts.  |  |
| IBCNEDE6   | This program contains function calls used for the data extracts.  |  |
| IBCNEDE7   | This program was added to include subroutines originally in routine IBCNEDE when IBCNEDE had expanded beyond the routine size limitation in VistA.  |  |
| IBCNEDEP   | This program finds records needing HL7 message creation and creates   |  |
| IDCNEDEO   | records in the Transmission Queue and Response Files.   |  |
| IBCNEDEQ<br>IBCNEDST   | This program contains some subroutines for processing a transmission.   |  |
|  | HL7 Registration Message Statistics   |  |
| IBCNEHLD   | This program will process deactivate registration MFN message. This should only be executed by instruction – to be used to turn off a site from electronic Insurance Identification and Verification interface.   |  |
| IBCNEHLI   | This program parses each incoming HL7 message and passes the message on to the processing program.  |  |
| IBCNEHL1   | This program, which processes incoming RPI messages, replaces IBCNEHLR  |  |
| IBCNEHL2   | This program, which processes incoming RPI messages, replaces IBCNEHLP  |  |

| Routine Name | Description  |  |
|--------------|--|--|
| IBCNEHL3     | This program, which processes incoming RPI messages, replaces            |  |
| IBCNEHL3     | Inis program, which processes incoming RPI messages, replaces IBCNEHLS   |  |
| IBCNEHL4     | This program, which processes incoming RPI messages, replaces IBCNEHLP   |  |
| IBCNEHL5     | HL7 Process Incoming RPI Messages  |  |
| IBCNEHL6     | HL7 Process Incoming RPI Continued                                       |  |
| IBCNEHLK     | This program processes the Registration MFN Acknowledgement message.     |  |
| IBCNEHLM     | This program will create the outgoing Registration MFN message.          |  |
| IBCNEHLO     | This program takes "ready to transmit" records and sets variables needed |  |
| ID CI (EIIE) | to create the HL7 message.   |  |
| IBCNEHLQ     | This routine builds the HL7 segments for an eIV Verification (RQI^I01)   |  |
|              | or Identification (RQI^I03) request.                                     |  |
| IBCNEHLT     | This program will process incoming HL7 MFN messages and update the       |  |
|              | appropriate tables   |  |
| IBCNEHLU     | This program contains some specialized HL7 utility functions.            |  |
| IBCNEKI2     | This program is a continuation of the eIV purge logic in IBCNEKIT.       |  |
| IBCNEKIT     | This program handles the purging of the eIV data stored in the IIV       |  |
|              | TRANSMISSION QUEUE File (#365.1) and in the IIV RESPONSE                 |  |
|              | File (#365). User can pick a date range for the purge. Data created      |  |
|              | within 6 months cannot be purged. The actual global kills are done by a  |  |
|              | background task after hours.   |  |
| IBCNEML      | MAILMAN NOTIFICATION TO LINK PAYERS                                      |  |
| IBCNEPM      | This program executes the Payer Maintenance option.                      |  |
| IBCNEPM1     | This program is a continuation of the Payer Maintenance option.          |  |
| IBCNEPM2     | This program is a continuation of the Payer Maintenance option.          |  |
| IBCNEPST     | This is the KIDS post-installation program for IB*2.0*184.               |  |
| IBCNEPY      | This program modifies entries in the PAYER File (#365.12).               |  |
| IBCNEQU      | This program performs the Request Electronic Insurance Inquiry           |  |
|              | functionality.   |  |
| IBCNERP0     | This program is part of the eIV Statistical Report.                      |  |
| IBCNERP1     | This program is part of the eIV Response Report.                         |  |
| IBCNERP2     | This program is part of the eIV Response Report compile.                 |  |
| IBCNERP3     | This program is part of the eIV Response Report print.                   |  |
| IBCNERP4     | This program is part of the eIV Payer Report.                            |  |
| IBCNERP5     | This program is part of the eIV Payer Report compile.                    |  |
| IBCNERP6     | This program is part of the eIV Payer Report print.                      |  |
| IBCNERP7     | This program is part of the eIV Statistical Report.                      |  |
| IBCNERP8     | This program is part of the eIV Statistical Report compile.              |  |
| IBCNERP9     | This program is part of the eIV Statistical Report print.                |  |
| IBCNERPA     | This program is part of the eIV Response Report.                         |  |
| IBCNERPB     | This program is part of the eIV Payer Link Report.                       |  |
| IBCNERPC     | This program is part of the eIV Payer Link Report.                       |  |
| IBCNERPD     | This program is part of the eIV Payer Link Report.                       |  |
| IBCNERPE     | This program is part of the eIV Response Report.                         |  |
| IBCNERPF     | This program is part of the eIV Insurance Update Report.                 |  |
| IBCNERPG     | This program is part of the eIV Insurance Update Report.                 |  |

| Routine Name | Description  |  |
|--------------|--|--|
| IBCNERPH     | This program is part of the eIV Insurance Update Report.                           |  |
| IBCNERPI     | IBCNE eIV Secondary Insurance Report Print   |  |
| IBCNERPJ     | This program is part of the HL7 Response Report.                                   |  |
| IBCNERPK     | This program is part of the HL7 Response Report.                                   |  |
| IBCNERPL     | This program is part of the HL7 Response Report.                                   |  |
| IBCNERTC     | Covered by Health Insurance  |  |
| IBCNERTQ     | Real-time Insurance Verification   |  |
| IBCNES       | Eligibility/Benefits screen.   |  |
| IBCNES1      | Eligibility/Benefits screen utilities.   |  |
| IBCNES2      | Eligibility/Benefits screen action protocols.                                      |  |
| IBCNES3      | Eligibility/Benefits screen action protocols, cont.                                |  |
| IBCNES4      | Eligibility/Benefits screen action protocols, cont.                                |  |
| IBCNESI      | Potential Medicare COB Prompts   |  |
| IBCNESI1     | MEDICARE POTENTIAL COB Patient Selection   |  |
| IBCNESI2     | MEDICARE PATIENTS WITH SUBSEQUENT INSURANCE  |  |
| IBCNETST     | eIV Gate-keeper test scenarios   |  |
| IBCNEUT1     | This program contains general eIV utilities.                                       |  |
| IBCNEUT2     | This program contains general eIV utilities.                                       |  |
| IBCNEUT3     | This program contains general eIV utilities.                                       |  |
| IBCNEUT4     | This program contains general eIV utilities.                                       |  |
| IBCNEUT5     | This program contains general eIV utilities.                                       |  |
| IBCNEUT6     | This program contains general eIV utilities.                                       |  |
| IBCNEUT7     | This program contains general eIV utilities.                                       |  |
| IBCNEUT8     | This program contains general eIV utilities.                                       |  |
| IBCNGPF      | This program is part of the List Group Plans without Annual Benefits               |  |
|              | Report.  |  |
| IBCNGPF1     | This program is part of the List Group Plans without Annual Benefits               |  |
| ID CNICDEA   | Report.  |  |
| IBCNGPF2     | This program is part of the List Group Plans without Annual Benefits Report.       |  |
| IBCNGPF3     | This program is part of the List Group Plans without Annual Benefits               |  |
| IDCNICD      | Report.  |  |
| IBCNICB      | Update utilities for the ICB interface.  |  |
| IBCNHPR      | This program is part of the Manually Added HPIDs to Billing Claim Report.          |  |
| IBCNHPR1     | This program is part of the Manually Added HPIDs to Billing Claim                  |  |
|              | Report.  |  |
| IBCNHPR2     | This program is part of the Manually Added HPIDs to Billing Claim Report.          |  |
| IBCNS3       | Display extended insurance information.  |  |
| IBCNSC       | This program edits an Insurance Company.   |  |
| IBCNSC01     | This program edits an Insurance Company.  This program edits an Insurance Company. |  |
| IBCNSC41     | Insurance plan screen utilities.   |  |
| IBCNSM       | This routine displays in list format one patient's policies, and allows for        |  |
|              | editing of these policies.   |  |
| IBCNSM1      | This routine displays in list format one patient's policies, and allows for        |  |

| Routine Name | Description  |  |
|--------------|--|--|
|              | editing of these policies  |  |
| IBCNSM2      | This routine displays in list format one patient's policies, and allows for                              |  |
|              | editing of these policies  |  |
| IBCNSM3      | This routine contains Insurance Management - Outputs   |  |
| IBCNSM4      | These routines display in list format one patient's policies, and allows                                 |  |
|              | for editing of these policies.   |  |
| IBCNSM5      | This routine prints the insurance plan worksheets and policy coverage reports.                           |  |
| IBCNSM6      | This routine prints the insurance plan worksheets and policy coverage reports.                           |  |
| IBCNSM7      | This routine prints the insurance plan worksheets and policy coverage reports.                           |  |
| IBCNSM8      | This routine prints the insurance plan worksheets and policy coverage reports.                           |  |
| IBCNSM9      | This routine prints the insurance plan worksheets and policy coverage reports.                           |  |
| IBCNSM31     | This routine displays in list format one patient's policies, and allows for editing of these policies    |  |
| IBCNSM32     | This routine displays in list format one patient's policies, and allows for editing of these policies    |  |
| IBCNSP       | This routine displays policy data for a patient in expanded format and allows for editing of the data.   |  |
| IBCNSP0      | This routine contains Insurance Management – Expanded Policy   |  |
| IBCNSP01     | This routine contains Insurance management – Expanded Policy.  |  |
| IBCNSP02     | This routine contains Insurance Management - Expanded Policy   |  |
| IBCNSP1      | Insurance Management - Policy Actions  |  |
| IBCNSP2      | This routine is the supported call to allow for editing of a patient's                                   |  |
|              | insurance policy and plan information from registration and billing.                                     |  |
| IBCNSP3      | This routine displays policy data for a patient in expanded format and allows for editing of the data.   |  |
| IBCNSP11     | This routine displays policy data for a patient in expanded format and allows for editing of the data.   |  |
| IBCNUPD      | Update Subscriber Info for Selected Patients   |  |
| IBCNVCC      | This program is part of the Patient Insurance Consistency Checker for System Sharing Verified Insurance. |  |
| IBCNVCC1     | This program is part of the Patient Insurance Consistency Checker for System Sharing Verified Insurance. |  |
| IBCNVPU0     | This program is the PIN/HL7 Utility Functions for HL7 System Sharing Verified Insurance.                 |  |
| IBCNVRD0     | This program is part of System Sharing Verified Insurance.   |  |
| IBCNVRD1     | This program is part of System Sharing Verified Insurance.   |  |
| IBCNVRP0     | This program is part of the Interfacility Ins Update Activity Report.                                    |  |
| IBCNVRP1     | This program is part of the Interfacility Ins Update Activity Report.                                    |  |
| IBCNVRP2     | This program is part of the Interfacility Ins Update Activity Report.                                    |  |
| IBCNVUT0     | This program is part of System Sharing Verified Insurance.   |  |
| IBCOC        | Prints a list of inactive insurance companies still listed as insuring patients.                         |  |

| Routine Name | Description   |  |
|--------------|---|--|
| IBCOC1       | Prints a list of new but not verified insurance.  |  |
| IBCOMA       | Identify active policies w/no effective date.   |  |
| IBCOMA1      | Identify active policies w/no effective date (con't).   |  |
| IBCOMC       | Identify Pt By Age With Or Without Insurance.   |  |
| IBCOMC1      | ALB/CMS-identify Pt by age with or without insurance (con't).   |  |
| IBCOMC2      | Identify Pt by age with or without insurance (con't).   |  |
| IBCOMD       | Generate insurance company listings.  |  |
| IBCOMD1      | Generate insurance company listings.  |  |
| IBCOMN       | Patients no coverage verified report.   |  |
| IBCOMN1      | Patients no coverage verified report (con't).   |  |
| IBCONS1      | Veterans with insurance outputs. (Routines formerly named DGCRONS1, DGCRONS2, DGCRONSC.).                         |  |
| IBCONS2      | Veterans with insurance outputs. (Routines formerly named   |  |
|              | DGCRONS1, DGCRONS2, DGCRONSC.).   |  |
| IBCONS3      | Veterans with insurance outputs interface with Claims Tracking.   |  |
| IBCONSC      | Veterans with insurance outputs. (Routines formerly named   |  |
|              | DGCRONS1, DGCRONS2, DGCRONSC.).   |  |
| IBCOPP       | List Ins. Plans by Co. (Driver).  |  |
| IBCOPP1      | List Ins. Plans by Co. (Driver 1).  |  |
| IBCOPP2      | List Ins. Plans by Co. (Compile).   |  |
| IBCOPP3      | List Ins. Plans by Co. (Print).   |  |
| IBCOPR       | Print dollar amounts for Pre-registration.  |  |
| IBCOPR1      | Print dollar amounts for Pre-registration.  |  |
| IBJDI4       | Patients with unidentified insurance.   |  |
| IBJDI41      | Patients with unidentified insurance (cont'd).  |  |
| IBJDI5       | Insurance policies not verified.  |  |
| IBJPI        | This program is used to define the IIV Site Parameters.   |  |
| IBJPI2       | This program performs the IIV Site Parameters actions.  |  |
| IBJPI3       | Most popular payer screen.  |  |
| IBJPI4       | Most popular payer screen.  |  |
| IBJPI5       | IBJP5 eIV Site Parameters Screen  |  |
| IBJPM        | This program displays and allows editing of the MCCR Site Parameters.   |  |
| IBOTR        | Insurance Payment Trend Report user interface. (Routines IBOTR and  |  |
|              | IBOTR1 were formerly named DGCROTR, DGCROTR1.)  |  |
| IBOTR1       | Insurance Payment Trend Report user interface. (Routines IBOTR and IBOTR1 were formerly named DGCROTR, DGCROTR1.) |  |
| IBOTR2       | Insurance Payment Trend Report data compilation. (Routine formerly named DGCROTR2.)                               |  |
| IBOTR3       | Insurance Payment Trend Report output. (Routines formerly named DGCROTR3, DGCROTR4.)                              |  |
| IBOTR4       | Insurance Payment Trend Report output. (Routines formerly named DGCROTR3, DGCROTR4.)                              |  |
| IBOTR11      | Insurance Payment Trend Report user interface. (Routines IBOTR and IBOTR1 were formerly named DGCROTR, DGCROTR1.) |  |
| IBOUNP1      | Inpatients w/Unknown or Expired Insurance Report.   |  |
| IBOUNP2      | Inpatients w/Unknown or Expired Insurance Report.   |  |

| Routine Name | Description  |
|--------------|--|
| IBOUNP3      | Inpatients w/Unknown or Expired Insurance Report.  |
| IBOUNP4      | Outpatients w/Unknown or Expired Insurance Report. |
| IBOUNP5      | Outpatients w/Unknown or Expired Insurance Report. |
| IBOUNP6      | Outpatients w/Unknown or Expired Insurance Report. |

# File List with Descriptions

WARNING: It is not recommended that you use VA FileManager to edit any of the files directly! Furthermore, editing any of the new files without direction from the interface programmers may cause the interface to become non-functional!

| File#    | File Name                 | Data Dictionary  |
|----------|---------------------------|--|
| 2        | PATIENT                   | ^DPT – contains all the patients followed by the   |
|          |                           | medical center/Outpatient clinic.  |
| 2.312    | INSURANCE TYPE SUB_FILE   | This multiple contains patient's insurance information.                                    |
| 2.322    | ELIGIBILITY/BENEFIT SUB-  | This multiple contains all of the eligibility and benefit                                  |
|          | FILE                      | data for a specific insured person returned from the                                       |
|          |                           | Payer.   |
| 36       | INSURANCE COMPANY         | ^DIC(36)- This file contains the names and addresses                                       |
|          |                           | of insurance companies as needed by the local facility.                                    |
|          |                           | The data in this file is NOT EDITABLE USING VA   |
|          |                           | FILEMAN. If a new entry needs to be made or an   |
|          |                           | existing entry changed, the user must be assigned the appropriate MAS or IB module option. |
| 350.9    | IB SITE PARAMETERS        | ^IBE(350.9) – This file contains the data necessary to                                     |
|          |                           | run the IB package. It has been modified to store the                                      |
|          |                           | parameters needed for the Insurance Identification and                                     |
|          |                           | Verification Interface. All data elements for the  |
|          |                           | Insurance Identification and Verification Interface will                                   |
|          |                           | be numbered 51.nn.   |
| 350.9002 | BATCH EXTRACTS (sub-file) | This multiple contains site parameters related to batch                                    |
|          |                           | extracts.  |
| 353.1    | PLACE OF SERVICE          |  |
| 355.12   | SOURCE OF INFORMATION     | ^IBE(355.12) – This file contains codes that respresent                                    |
|          |                           | the origination of the patient's insurance information                                     |
| 355.33   | INSURANCE VERIFICATION    | ^IBA(355.33) – This file contains insurance  |

|          |                             | "TRUSTED" flag.   |

| File # | File Name               | Data Dictionary   |  |
|--------|-------------------------|---|--|
| 365.13 | PAYER APPLICATION       | ^IBE(365.13) – This file contains all the different       |  |
|        |                         | applications that a payer could be contacted              |  |
|        |                         | electronically for.                                       |  |
| 365.14 | IIV TRANSMISSION STATUS | ^IBE(365.14) – This file contains all the possible        |  |
|        |                         | message statuses that are found in the IIV                |  |
|        |                         | TRANSMISSION QUEUE File (#365.1) and the IIV              |  |
|        |                         | RESPONSE File (#365).                                     |  |
| 365.15 | IIV STATUS TABLE        | ^IBE(365.15) – This file contains the possible eIV        |  |
|        |                         | Status symbols, and in some cases the applicable error    |  |
|        |                         | message, that is found in the Insurance Buffer entries.   |  |
| 365.2  | IIV RESPONSE REVIEW     | ^IBCN(365.2) - This file holds the outcome of the         |  |
|        |                         | reviews of MEDICARE (WNR) messages contained in           |  |
|        |                         | the IIV RESPONSE file (#365). The file is populated       |  |
|        |                         | when the user enters comments and statuses against        |  |
|        |                         | selected messages using the Medicare Potential COB        |  |
|        |                         | Worklist [IBCNE POTENTIAL COB LIST] option.               |  |
| 366    | IB SSVI PIN/HL7 PIVOT   | ^IBCN(366) – This file collects all of the PIN events     |  |
|        |                         | that need to be broadcast to the system. The entries in   |  |
|        |                         | this file contain information on how to get back to its   |  |
|        |                         | parent event in PIMS. There are no parent-child           |  |
|        |                         | relationships stored here.                                |  |
| 366.1  | IB INSURANCE            | ^IBCN(366.1) – This file contains those patients who      |  |
|        | INCONSISTENT DATA       | were found to have missing and/or inconsistent data       |  |
|        |                         | elements in the PATIENT file by the IB Insurance Info     |  |
|        |                         | VIEW/EDIT consistency checker. The inconsistent           |  |
|        |                         | data elements are stored in this file where individual    |  |
|        |                         | checks can be turned on or off by the facility. Once      |  |
|        |                         | the data is corrected through the appropriate insurance   |  |
|        |                         | menu options, the entry will be removed from this file.   |  |
| 366.2  | IB INSURANCE            | ^IBCN(366.2) – This file contains those entries which     |  |
|        | CONSISTENCY ELEMENTS    | are checked by the IB Insurance Info View/Edit            |  |
|        |                         | module consistency checker. Other than turning            |  |
|        |                         | individual checks on or off, the user should not alter or |  |
|        |                         | add to this file in any way. Making any modification      |  |
|        |                         | to this file will definitely cause the consistency        |  |
|        |                         | checker to function improperly.                           |  |

## **Purging**

All inquiries and responses for electronic eligibility requests made through eIV are stored in the IIV TRANSMISSION QUEUE File (#365.1) and the IIV RESPONSE File (#365). Over time these files will continue to grow as more inquiries and responses are stored. Therefore, the option Purge Insurance Verification Transactions [IBCNE PURGE IIV DATA] has been provided to allow inquiry and response data that is at least six months old to be purged. Note that it is critical to the eIV software to maintain at least six months of inquiry and response data to properly determine when a new inquiry should be made. This is due to the fact that eIV uses the information in these histories to determine when inquiries were made for specific patients/payers. The eIV nightly process will send an email reminder notice to the

IBCNE eIV MESSAGE mail group on the first day of each month if records are found that are eligible to be purged.

A modification was made with patch IB\*2.0\*549 where the field DO NOT PURGE (#.11) was added to the IIV RESPONSE FILE (#365). This flag is set to yes – meaning do not purge – when it is associated with a response to which the INSURANCE TYPE subfile (#2.312) is pointing. Therefore, even though a response and its associated inquiry may be older than six months, it may not be eligible to be purged. The flag will be set back to no – meaning it can be purged – once the INSURANCE TYPE subfile (#2.312) is no longer pointing to the record. The INSURANCE TYPE subfile points to a response record when one of two situations occur: a) eIV payer response (X12 271 message) is auto updated and processed programmatically updating the patient's policy without user intervention, b) A buffer entry (Insurance Verification Processor file #355.33) is manually accepted and the user elects to update/accept the eligibility benefit information. If the INSURANCE TYPE subfile points to a response record prior to either of those situations, the DO NOT PURGE flag (#365, .11) on the original message will be changed from YES to NO. Then the INSURANCE TYPE subfile will be updated to point to the new (the accepted) eIV Response and the DO NOT PURGE flag will be set to YES for the current record.

## **SECURITY**

### File Protection

The Insurance Identification and Verification Interface contains files that are standardized. They carry a higher level of file protection with regard to Delete, Read, Write, and LAYGO access, and should not be edited locally unless otherwise directed. The data dictionaries for all files should NOT be altered.

The following is a list of recommended VA FileMan access codes associated with each file contained in the KIDS build for the eIV interface.

| File #  | File Name                           | DD | RD | WR | DEL | LAYGO | AUDIT |

## Security Keys

| Security Key Name     | Description  |
|-----------------------|--|
| IBCNE EIV MAINTENANCE | This security key is for Electronic Insurance Verification project |
|                       | (eIV). It is used to restrict access to the Auto Match add/edit    |
|                       | options, functions, and applications. Auto Match is a utility that |
|                       | links incorrect, user entered insurance company names with         |

| Security Key Name    | Description   |
|----------------------|---|
|                      | correct, active insurance company names. Only users holding this    |
|                      | key may add, edit, or delete entries in the Auto Match file.        |
| IBCNE IIV SUPERVISOR | This security key is for the Electronic Insurance Verification      |
|                      | project (eIV). It will be used to restrict access to certain eIV    |
|                      | options and applications. Only users holding this key will be       |
|                      | allowed to access these eIV options and applications.               |
| IBCNE IIV AUTO MATCH | Changed to IBCNE EIV MAINTENANCE by patch IB*2.0*528.               |
|                      |   |
|                      |   |
| IB INSURANCE COMPANY | This security key is for both integrated billing and the Electronic |
| EDIT                 | Insurance Verification project (eIV). It will be used within the    |
|                      | Insurance Verification Processor to determine what warning          |
|                      | message to display to the user if one needs to create an insurance  |
|                      | company while processing an entry from within the buffer            |
| IB GROUP/PLAN EDIT   | This security key is for both integrated billing and the Electronic |
|                      | Insurance Verification project (eIV). It will be used within the    |
|                      | Insurance Verification Processor to determine what warning          |
|                      | message to display to the user if one needs to create a group/plan  |
|                      | while processing an entry from within the buffer.                   |

## Options Locked by Security Keys

| Options/Programs locked by a Security Key                    | Security Key              |

| option   |                           |

Security

## **EXTERNAL INTERFACES**

### HL7 Messaging with the Eligibility Communicator (EC)

Interfacing between the two systems is accomplished by using VistA's HL7 software to communicate with the Eligibility Communicator. The HL7 software opens a TCP/IP port to transmit data to the Vitria BusinessWare application. The HL7 software listener waits for a response and processes the data when a response is received.

## **HL7 Communication Setup**

Your facility should already be using HL7 for other VistA modules. Additional information on the setup of the HL7 package may be found at <a href="http://vista.med.va.gov/hl7/archive/1.6/hl71\_6p19.pdf">http://vista.med.va.gov/hl7/archive/1.6/hl71\_6p19.pdf</a>.

The logical links needed for this patch will be sent as part of the Installation KIDS.

```

The IIV EC Logical Link is the link that is used to transmit messages. It is defined as a CLIENT (SENDER). A CLIENT (SENDER) indicates that this Logical Link connects to a target system, with the current system acting as the sender. Since the eIV HL7 messages are transmitted in batch mode, it also has a definition of NON-PERSISTENT so that when all the messages have been sent, it will go to an Inactive state.

## Data Sent to the Eligibility Communicator

As VistA sites install the Insurance Identification and Verification patch, VistA sends important information to the Eligibility Communicator. This registration dialog triggers several events; a download of the Payer Table and an update to the Eligibility Communicator's Facility Table. The Eligibility Communicator returns an MSA Acknowledgement message to the facility, so that eIV processing can begin at the registering site.

- **REGISTRATION** The Registration Request is the HL7 message that VistA sends to EC to pass site identifying information. A site sends an initial request. Subsequently the site sends additional requests on a daily basis to update the registration should any changes have taken place in the 24 hours before and to report local VAMC eIV statistics.
- **ELIGIBILITY INQUIRY** The Eligibility Inquiry Request is the HL7 message that VistA sends to EC to ask for identification of insurance for a veteran.

**Note:** The details for the mapping of these messages (last updated with patch IB\*2.0\*549) can be found in the most current ICD document, eIV\_ICD\_v4.doc. This document can be found at the following VA location:

http://tspr.vista.med.va.gov/warboard/anotebk.asp?proj=1733&Type=Active

### Data Received From the Eligibility Communicator

- **REGISTRATION ACKNOWLEDGEMENT -** The Eligibility Communicator sends the Registration Acknowledgement after receiving the request and filing the registration information in the Cache.
- **ELIGIBILITY RESPONSE** The Eligibility Response Messages report payer's answers that did not include any error indications. Those that did are reported using the Inquiry Problem Message. Non-error response messages are an RPI^IO1 event regardless as to whether the inquiry was for an identification or a verification.
- ELIGIBILITY INQUIRY PROBLEM MESSAGES There are two types of Inquiry Problem Messages. One type of message occurs when EC receives an HL7 message from a VistA facility and it is validated. If data is found missing or inaccurate so that translation to the X12 270 message cannot be done correctly, EC sends an email message to EC support staff for resolution. This is one type of Inquiry Problem message. The other type of Inquiry Problem message is after EC has sent the X12 270 messages on to the Payer and the Payer returns it with an error in the X12 'AAA' segment. Some error codes may be returned to the VistA facility as an Inquiry Problem Message for handling and some errors may remain with EC for resolution. The message event is the same for either Inquiry Problem type.
- TABLE UPDATES All table messages are an MFN^M01 event. When a VistA site initially installs the eIV software, the Eligibility Communicator for eIV is notified via an MFN^M01 message. The EC sends all current Payer identifications to the VistA site as part of this enrollment process. Any subsequent modifications or additions to the Payer table maintained by the EC are sent in the same manner. Table updates are also used to maintain some other eIV dictionaries and some eIV parameter settings.

**Note:** The details for the mapping of these messages (last updated with patch IB\*2.0\*549) can be found in the most current ICD document, eIV\_ICD\_v4.doc. This document can be found at the following VA location: <a href="http://tspr.vista.med.va.gov/warboard/anotebk.asp?proj=1733&Type=Active">http://tspr.vista.med.va.gov/warboard/anotebk.asp?proj=1733&Type=Active</a>

# APPENDIX A – TABLE OF EIV GENERATED MAILMAN MESSAGES

The eIV interface will create a MailMan message under certain circumstances. This chart will help to identify when these messages are triggered and from where. If the recipient of the message was not defined, then the message will be rerouted to the 'Postmaster'.

| <b>Triggering Event</b>   | Routine Reference | Recipients                               | Subject   | Message Text  |
|---|-------------------|--|---|---|
| Error returned<br>when adding an<br>Insurance Buffer<br>entry                               | IBCNEBF+156       | MESSAGES<br>MAILGROUP<br>(#350.9, 51.04) | Error creating<br>Buffer Entry                            | Error returned by \$\$ADDSTF^IBCNBES: {Error Message} Values: Patient DFN = {Patient IEN} Pt Ins Record IEN = {Patient Ins IEN} Please log a NOIS for this problem.   |

None of the associated responses have this status. Please create a NOIS specifying that this Transmission Queue entry is inconsistent with its associated responses and, as a result, its status could not be adjusted.  |
| Most popular insurance sites.                  | IBY271PS+77              | MESSAGES<br>MAILGROUP<br>(#350.9, 51.04) | Most Popular Insurance Site Parameter   | As part of patch IB*2.0*271, the Most Popular Insurance functionality, accessed by the MP action of the IIV Site Parameters, has been modified. Prior to this patch, the Most Popular Insurance Companies were automatically identified based on the number of authorized bills created. IB*2.0*271 has changed two aspects of the functionality. The list will now contain payers rather than insurance companies. In addition, these payers will be manually entered by each site. As a result of these changes, the prior values of this list have been deleted. If your site has elected to use this functionality, please update the table with the payers that are most commonly used in your facility and who are nationally active for IIV. Please select option, "IBJ MCCR SITE PARAMETERS", action MP (Most Popular Payers) within the IIV parameters to populate the list. |

## APPENDIX B – INCOMING DATA MAPPING

The following table identifies the mapping of each data element of an incoming eligibility response message (HL7 Message Type: RPI^I01) to the corresponding storage location within the VistA Files. The right-most column indicates the storage location for each data element upon acceptance of the Insurance Buffer entry information.

- IIV Response file (#365) includes a pointer BUFFER ENTRY (#.04) to the Insurance Verification Processor file (#355.33).
- Patient file's (#2), Insurance Type subfile (#2.312) includes a pointer EB DISPLAY ENTRY (#8.03) to the IIV Response file (#365).
- Patient file's (#2), Insurance Type subfile (#2.312) that are auto updated are indicated by 'Auto Update'. Fields that are manually updated are indicated by 'Manual Update'. Note that some fields may be both auto and manually updated.

| IIV Response File (#365) →      | Insurance Verification Processor file (#355.33) → | Patient File (#2) – Patient's policy OR Group Insurance Plan File (#355.3) | Display of data related to<br>Eligibility Benefits after Payer<br>response is manually accepted<br>or auto updated <sup>1</sup> |

Appendix B – Incoming Data Mapping

## APPENDIX C - TROUBLESHOOTING

eIV makes heavy use of HL7 messaging. Ensure that the HL7 globals have sufficient room for growth. Reference HL\*1.6\*19 patch documentation for further instructions. Also, reference the External Interfaces – HL7 Communications Setup section, in this manual, for specific eIV HL7 information.

The HL7 Logical Link associated with this interface is IIV EC.

How To Determine If Connectivity To Austin Is Lost...

If the "Inquiries Sent" and "Responses Received" entries on the <u>IIV Statistical report</u> [IBCNE IIV STATISTICAL REPORT] both remain at zero while the "Queued Inquiries" entry on the report continues to increase over a period of time, then no IIV inquiries are being sent (See Section 6 of the Integrated Billing Insurance Identification and Verification Interface User Guide). If this situation occurs over a two days elapse and both the "Inquiries Sent" and "Responses Received" entries remain at zero, there is a communications problem.

## How To Restore Connectivity To Austin...

- 1. Verify that the name of the HL7 Logical Link has not changed. It must be "IIV EC".
- 2. Verify the following settings for the HL7 Logical Link "IIV EC":
  - a. The institution field is blank
  - b. The domain field is set to IIV.VITRIA-EDI.AAC.VA.GOV
  - c. The AUTOSTART field is set to enabled
  - d. The TCP/IP address is left blank. It will self populate later.
  - e. The TCP/IP Port is set to **5100**
- 3. Verify that the HL7 Logical Link "IIV EC" is running.
- 4. Ask your IB Supervisor or insurance personnel who brought this communication issue to your attention, to review the IIV Statistical report the following day and confirm that connectivity has been restored with Austin.
- 5. If this does not resolve your communication with Austin for IIV, ask the IB Supervisor or insurance personnel to log a Remedy Ticket with the VA support.

#### Example – HL7 Logical Link

AUTOSTART: Enabled

QUEUE SIZE: 10

LLP TYPE: TCP
```

# APPENDIX D – eIV IMPLEMENTATION QUICK CHECKLIST (IB\*2.0\*184 only)

The following tasks must be accomplished before, during and after the eIV patch IB\*2.0\*184 is installed at your medical center. This quick checklist identifies the order in which tasks must be completed and responsible parties for either performing an action or providing information. Please refer to the eIV Installation Guide for step-by-step instructions on how to complete these actions.

| <b>✓</b> | Pre-Implementation Tasks   | IRM | Revenue<br>Coordinator<br>and/or<br>Insurance<br>Supervisor |
|----------|--|-----|---|
|          | Verify that required IB patches were installed.  | ×   |   |
|          | Verify that the domain reflected in patch XM*DBA*153 was manually added to the system. | ×   |   |
|          | Identify members of the IBCNE IIV MESSAGE mail group.                                  |     | ×   |

| <b>✓</b> | Patch Installation Task  | IRM | Revenue<br>Coordinator<br>and/or<br>Insurance<br>Supervisor |
|----------|--|-----|---|
|          | With the assistance of a system administrator (system manager) define the new IBCN global. | ×   |   |
|          | Ensure that all Integrated Billing users are logged off the system.                        | ×   |   |
|          | Install the IB*2.0*184 patch.  | ×   |   |
|          | Enable journaling for the new ^IBCN global.  | ×   |   |

| <b>✓</b> | Post-Installation Tasks   | IRM | Revenue<br>Coordinator<br>and/or<br>Insurance<br>Supervisor |
|----------|---|-----|---|
|          | Add members to the IBCNE IIV MESSAGE mail group.  | ×   |   |
|          | Assign security keys & menus to users.  | ×   |   |
|          | Setup HL7 logical links for IIV   | ×   |   |
|          | Configure the eIIV site parameters as recommended in the Installation Guide.  IRM must provide assistance with setting up the eIIV Site Parameters that correspond with HL7 messages / traffic. | ×   | x   |

| <b>✓</b> | Site Registration Tasks   | IRM | Revenue<br>Coordinator<br>and/or<br>Insurance<br>Supervisor |
|----------|---|-----|---|
|          | Execute the IBCNE IIV BATCH PROCESS option and wait for it to complete.   | ×   |   |
|          | Check IBCNE IIV MESSAGE mail group messages. Proceed if no "problem" messages were received.  Otherwise, reconcile any "problem" messages and start over.       | ×   |   |
|          | Check the HL7 system monitor for incoming messages and verify that 350+ messages were received.   | ×   |   |
|          | Check IBCNE IIV MESSAGE mail group messages again.  Proceed if no "problem" messages were received. Otherwise, reconcile any "problem" messages and start over. | ×   |   |
|          | Confirm the HL7 logical link settings. Proceed if they have not been updated. Otherwise, start over.  | ×   |   |

| <b>✓</b> | Post-Registration Tasks  | IRM | Revenue<br>Coordinator<br>and/or<br>Insurance<br>Supervisor |
|----------|--|-----|---|
|          | Link insurance companies to payers.  |     | ×   |
|          | Enable the linked payers.  |     | ×   |
|          | Schedule the nightly IBCNE IIV BATCH PROCESS through TaskMan.  | ×   |   |
|          | Use the IIV Site Parameters and gradually enable IIV extracts to begin sending inquires and receiving responses. |     | ×   |

# APPENDIX E – eIV Database Integration Agreements (DBIAs)

This appendix lists the associated DBIAs for the eIV software. Please refer to FORUM for the most up-to-date listing of active DBIAs.

| IA#        | Between IB and           | Related to   | FORUM                            |  |

# APPENDIX F – How to Test the eIV Interface with the Test Eligibility Communicator

This appendix explains how to test the electronic Insurance Verification interface from a VistA test or development account with the test Eligibility Communicator (EC) that is located in Austin.

In order to test the eIV interface from a development/test account with the test EC, the developer must use a small set of preapproved test patients with specific criteria that the Financial Services Center (FSC) has agreed upon. This is because eIV inquiries (270 transmission) to the insurance clearinghouse can only be made for actual patients. Therefore, when this testing is performed FSC does not send or receive messages from the clearinghouse and instead returns back a canned response (271 transmission – payer response) that is hardcoded for each type of test being performed.

Prior to patch IB\*2.0\*549, if the interface was on for a development/test account and the developer sent a 270 transmission (eIV inquiry) for a patient that was not one of the agreed upon test patients, or key data elements (e.g., subscriber ID, patient's date of birth, patient's sex, patient's name, and payer's name) of that patient did not match the data that FSC was expecting, an error would occur at FSC and the issue would have to be fixed manually before testing could proceed again. No other test eIV inquiries would be processed from any VistA development/test account while FSC was manually addressing the situation of receiving an eIV inquiry with unexpected data. Not only did this cause manual work, but it also stopped other people from testing with eIV.

With the introduction of IB\*2.0\*549, the system checks to see if the site is in test or production mode. If the site is in test mode, the system checks the data in the transmission to determine if all of the data fields match a test that has been previously approved by FSC. If the eIV inquiry did not match a test then the eIV inquiry is not transmitted to FSC but would instead remain in the IIV Transmission Queue (#365.1) with a status of 'Ready to Transmit'. This alleviates the bottleneck that would have occurred when improper test data was sent to FSC and had to be manually deleted. This check is done in the XMITOK method of routine IBCNETST. After July 2016, FSC will send a default AAA error response (message with error code T4) whenever VistA sends an eIV inquiry to the test EC system for which there is no predetermined (previously agreed upon) response based on the Subscriber ID/Patient ID and Payer's VA National ID combination.<sup>2</sup> It is important to maintain the existence of XMITOK^IBCNETST to control the number eIV inquiries/responses between VistA and the test EC system especially when one is trying to trace a specific scenario.

Below is a table which lists the data required for the currently agreed upon test cases. If a different set of criteria is needed to test something that these cases do not currently cover, the developer must talk to someone at FSC to either modify an existing test case or add a new one. Any new or modified test case must be updated in both the XMITOK^IBCNETST routine and in the chart below in this document. These two items must remain in synch for future developers and efforts.

March 2018

<sup>&</sup>lt;sup>2</sup> When a tester/developer receives an eIV response with an error code of T4 from the test EC system, they either need to correct the Payer's VA National ID or the Subscriber ID/Patient ID on the eIV inquiry. However, if the tester/developer believes the data is correct per the test data chart below, FSC should be contacted.

#### Important things to know to read this chart:

#### **PAYER**

The patient must have an insurance policy that is active (no expiration date) in VistA with an insurance company (#2.312, .01) that is active and linked to the payer in the "Payer" column of this chart. This payer must be Nationally Active and Locally Active in file #365.12 for the application "IIV". This payer must also have the VA National ID match what is listed below in the chart.

\* Note the VA National ID may be different than what the VA National ID is in production for that Payer. For example, the payer "CMS" has a different VA National ID for testing than for production.

#### **Group ID**

The patient's active policy on file must have the NEW GROUP NUMBER (#2.312, 21) match exactly what is listed in the "Group ID" column of this chart, including spaces. It is case sensitive due to XMITOK^IBCNETST and Auto Update.

\* Note: For these test cases it does not matter what the Group Name is. It is recommended that the NEW GROUP NAME (#2.312,20) is set to the same thing as the Group ID. It will help reduce confusion when reviewing test data and when troubleshooting with FSC.

\*\* Note: The patient's policy uses GROUP PLAN (#2.312, .18) to point to the GROUP INSURANCE PLAN file #355.3. It is this pointer that calculates the fields (#2.312, 20) & (#2.312, 21).

#### Subscriber ID

The patient's active policy on file must have the SUBSCRIBER ID (#2.312, 7.02) match exactly what is listed in the "Subscriber ID" column of this chart. It is case sensitive due to XMITOK^IBCNETST and Auto Update.

#### **Subscriber**

The patient's active policy on file must have the NAME OF INSURED (#2.312, 7.01) match exactly what is listed in the "Subscriber" column of this chart. It is case sensitive due to XMITOK^IBCNETST and Auto Update.

#### **Patient ID**

The patient's active policy on file must have the PATIENT ID (#2.312, 5.01) match exactly what is listed in the "Patient ID" column. It is case sensitive due to XMITOK^IBCNETST and Auto Update.

#### **Patient**

The patient's active policy on file must have the NAME (#2, .01) be the exact same as the name listed in the "Subscriber" column if not stated otherwise below in the chart. Refer to the "Patient" column for instructions of what the value of this field should be. It is case sensitive due to XMITOK^IBCNETST and Auto Update.

\* Note: The test patient must have an INTEGRATION CONTROL NUMBER (#2,991.01) populated before it can be used as a test patient for an eIV inquiry.

Patient's DOB

The patient's active policy on file must have the DATE OF BIRTH (#2, .03) match exactly what is listed in the "Patient's

DOB" column.

Patient's Sex The patient's active policy on file must have the SEX (#2, .02) match exactly what is listed in the "Patient's Sex" column.

In the future, a developer may drop the SEX from XMITOK^IBCNETST and the chart below with FSC permission. Currently, FSC and eIV Auto Match checks (AUTOUPD^IBCNEHL1) does not need this data element to work but

XMITOK^IBCNETST checks for this value.

What is returned & Additional Instructions

This column may give other important information needed in order to set up the test case properly in VistA. This column tells you what type of payer response you will receive back from FSC for each different test case.

\* Note: For Dependent eIV inquiries (the patient is not the subscriber), the INSURED'S DOB (#2.312, 3.01) must be set to the subscriber's date of birth, the INSURED'S SEX (#2.312, 3.12) must be set to the subscriber's sex, and the PT. RELATIONSHIP TO INSURED (#2.312, 16) must be set as indicated in the below chart. The subscriber must already be a patient defined in VistA with the appropriate NAME (#2, .01), DATE OF BIRTH (#2, .03) and SEX (#2, .02) fields set to the appropriate values for the subscriber's information.

| Payer                              | Group ID      | Subscriber<br>ID | Subscriber     | Patient ID               | Patient               | Patient's DoB | Patient's<br>Sex | What is returned & additional instructions  |
|------------------------------------|---------------|------------------|----------------|--------------------------|-----------------------|---------------|------------------|---|
| Aetna (with VA National ID "VA1")  | GRP NUM 13805 | 111111AE         | IBSUB,ACTIVE   | 111111AE                 | Same as<br>subscriber | 2/2/1922      | М                | FSC returns an <u>Active</u> response for a patient who is the subscriber. The response contains benefit information. |
| CIGNA (with VA National ID "VA10") | GRP NUM 5442  | 222222CI         | IBSUB,ACTIVE   | Same as<br>subscriber ID | Same as<br>subscriber | 2/2/1922      | M                | FSC returns an <u>Active</u> response for a patient who is the subscriber. The response contains benefit information. |
| Aetna (with VA National ID "VA1")  | GRP NUM 13188 | 111111FG         | IBSUB,INACTIVE | 111111FG                 | Same as<br>subscriber | 1/1/1948      | F                | FSC returns an <u>Inactive</u> response for a patient who is the subscriber.  |

| Payer   | Group ID       | Subscriber<br>ID | Subscriber         | Patient ID | Patient               | Patient's DoB | Patient's<br>Sex | What is returned & additional instructions   |
|---|----------------|------------------|--------------------|------------|-----------------------|---------------|------------------|--|
| Cigna (with VA National ID "VA10")              | GRP NUM 5442   | 012345678        | IBSUB,AAAERRO<br>R | 012345678  | Same as<br>subscriber | 2/11/1947     | M                | FSC returns a response for a patient who is the subscriber. The response will contain a AAA (271 msg with an error). (i.e., Patient not found.)  |
| CMS <sup>3</sup> (with VA National ID "VA1628") | Doesn't matter | 333113333A       | IB,PATIENT         | 333113333A | Same as<br>subscriber | 3/9/1935      | М                | FSC returns an <u>Active</u> response for a patient who is the subscriber. The response <u>contains 1 additional</u> 'potential' <u>insurance</u> reported by Medicare (1 trailer).  |
| CMS <sup>4</sup> (with VA National ID "VA1628") | Doesn't matter | 111223333A       | IBSUB,TWOTRLR<br>S | 111223333A | Same as<br>subscriber | 5/5/1955      | M                | FSC returns an <u>Active</u> response for a patient who is the subscriber. The response <u>contains 2 additional 'potential' insurances</u> reported by Medicare (2 trailers).   |
| Aetna (with<br>VA National<br>ID "VA1")         | AET1234        | W1234561111      | IBINS,ACTIVE       | W123452222 | IBDEP,ACTIV<br>E      | 3/4/1990      | F                | FSC returns an Active response for a patient who is a dependent of the subscriber.  For FSC setup only: Dependent resp. with EB12=W  For VistA setup only: Set the Subscriber's DOB to 7/26/41. Make sure the subscriber (not patient) is a Male. Define the dependent 'IBDEP,ACTIVE' to be the subscriber's CHILD by setting the patient relationship to insured. |

<sup>&</sup>lt;sup>3</sup> See footnote below regarding "CMS"

<sup>&</sup>lt;sup>4</sup> CMS is the current payer representing Medicare as of July 2016. Before setting up a test case for Medicare, one must confirm with FSC which payer to use for Medicare in the "Test EC" environment. Also, confirm the payer's "VA National ID" that must be used for testing. The MEDICARE PAYER (#350.9, 51.25) must be set to the current payer that FSC is currently using for Medicare testing. Therefore, the CMS in the table above would change to the current Medicare payer used for testing.

## Appendix E – eIV Database Integration Agreements (DBIAs)

| Payer                             | Group ID      | Subscriber<br>ID | Subscriber           | Patient ID | Patient               | Patient's DoB | Patient's<br>Sex | What is returned & additional instructions   |
|-----------------------------------|---------------|------------------|----------------------|------------|-----------------------|---------------|------------------|--|
| Aetna (with VA National ID "VA1") | GRP NUM 13805 | 222222AE         | IBSUB,CANNOTFI<br>ND | 222222AE   | Same as<br>subscriber | 7/7/1922      | M                | FSC returns an response saying that the user can not be found by replying with an ambigious reponse but no AAA message for a patient who is the subscriber. This is happening today in the real world. |

## **GLOSSARY**

| Term              | Description  |
|-------------------|--|
| AITC              | Austin Information Technology Center (formerly                                       |
|                   | Austin Automation Center - AAC)  |
| EC                | Eligibility Communicator – this refers to the  |
|                   | National Health Insurance Cache database that is                                     |
|                   | housed in the AITC in Austin, TX. The eIV  |
|                   | software communicates with the Eligibility   |
|                   | Communicator directly through HL7. The EC in   |
|                   | turn communicates with Communication Partners  |
|                   | to create an eligibility response that is returned to                                |
|                   | the VistA system.  |
| FSC               | Austin Financial Services Center   |
| HIPAA             | Health Insurance Portability and Accountability                                      |
|                   | Act of 1996  |
| HL7               | Health Level Seven, a standardized application                                       |
|                   | level communications protocol that enables   |
|                   | systems to exchange information and to affect  |
|                   | requests and responses. Basically, HL7 is an   |
|                   | agreement between two HL7-compliant systems  |
|                   | that specifies where to expect certain data in a                                     |
|                   | stream of characters.  |
| IB                | Integrated Billing   |
| MCCR              | Medical Care Cost Recovery. The collection of  |
|                   | monies by the Department of Veterans Affairs   |
| D : 111 : 11      | (VA).  |
| Required Variable | An attribute of a package interface. It is a variable                                |
|                   | that must exist in order for the interface's entry                                   |
| C ' V             | point to be called.  |
| Security Key      | Used in conjunction with locked options or   |
|                   | functions. Only holders of this key may perform                                      |
|                   | these options/functions. Used for options, which                                     |
| SSVI              | perform a sensitive task.  |
| 33 V I            | System Shared Verified Insurance. This functionality provides higher quality patient |
|                   | insurance data to users both locally and nationally                                  |
|                   | as well as reduces redundant data entry. This is                                     |
|                   | achieved by ensuring that patient insurance data                                     |
|                   | fields are filled in and that data is moved to other                                 |
|                   | sites where the patient has been seen.   |
|                   | sites where the patient has been seen.   |
